Projects

- Variables - electronics shopping website

PROJECTS

Variables - electronics shopping website Workplace/Company

09/2022 - 12/2022

"Variables is an e-commerce website built using the .NET Framework that offers a wide range of electronic digital products, including smartphones, smartwatches, earphones, tablets, speakers, and more. Customers can browse the product catalog, view detailed product information, add items to their cart, and securely complete their purchases using various payment options. The website also incorporates user registration and authentication to provide personalized shopping experiences. With its intuitive user interface and robust backend functionality, Variables ensures a seamless and convenient shopping experience for tech enthusiasts."
